The MSU In Vivo Facility offers an exhaustive list of models and capabilities to suit your efficacy and early safety testing, animal health, and device testing needs.

Examples of our capabilities are listed. Please contact us if your needs are beyond those printed or if you would like further information.

Because we are part of a large university with a top veterinary teaching hospital and other state-of-the-art facilities, we are able to offer a large range of in vivo models in rodent and nonrodent species, including large animals and farm animals.
